

Lab Supply Program 2019

Lab Supply provides a complete line of products for lab animal facilities including animal diets, beddings, enrichment items and personal protection equipment (PPE). We have been providing these products to customers in the South for more than twenty-five years.

Each of our facilities in Fort Worth, TX (25,000 square feet), Houston, TX (15,000 square feet) and Orlando, FL (10,000 square feet), and Durham, NC (20,000 square feet) are climate controlled with redundant HVAC systems. We constantly monitor and document temperature to make sure that the warehouse is less than 70 degrees with 50% humidity. We are also proactive in pest control and we use a nationally recognized company to manage the program. Control stations are placed every 20 feet along the perimeter of the warehouse. All products are palletized and located at least 12" from wall.

Our closed facilities are cleaned meticulously, all products are on pallets and we rotate most stock on a weekly basis.

We also provide further support to our customers with custom services such as irradiation of products, analytical assays of products or weekly delivery of products in our trucks for "just in time" inventory.
